

Now You See It...Eye-Hand Coordination Helps Children with Brain Tumors & Cancer

Through sponsorships by local businesses like **United Auto Repair**, these past months have seen smiles on children afflicted with brain cancers and tumors.

Programs using magic and music were delivered at hospices and hospitals such as the **Beth Israel Medical Center, Pediatrics** division, to involve little ones in post surgical movement of their limbs by evoking curiosity and laughter. Teaching and demonstrating magic and music helps rebuild eye-hand coordination and raises the immune system, aiding recovery.

One seven year old boy who could not easily move, smile or talk after cranial surgery for cancerous brain tumors, was so enchanted during a display of magic, comedy and music by Laurice and Sandra Nordgren, he reached out his hands and whispered, "**Abacadabra**", into the renowned magician's ear.

*"In this busy world, pause to find the magic moment"
- Sandra Nordgren*
